1. https://github.com/djyeakle/Survey-of-Programming-Languages
2. 

3. My button handler starts by checking the inputs to ensure that all fields have been filled out. Then, it uses a try to change the grades entered from strings to doubles and calculates the average of those grades. Then it takes the average and turns it into a letter grade. If this does not work, the catch looks for the number format error and says that the fields must contain numeric values.
